# Preface

Mustansiriyah International Conference on Applied Physics (MICAP-2021) was virtually hosted by the Department of Physics, College of Science at Mustansiriyah University in Baghdad, Iraq, on June 28 and 29, 2021 (<https://uomustansiriyah.edu.iq/>).

The conceptual idea behind the MICAP-2021 is that the science presented there contributes to the development of natural science in the world. Hence, the conference program was organized in such a way as to include interesting oral presentations in interdisciplinary fields proposed by eminent scientists from American, European, and Asian institutes. Accordingly, multiple up-to-date topics in physics were covered by the MICAP-2021 conference. These topics were martial science, optics, nanotechnology, plasma, spectroscopy, lasers, nuclear physics etc.

The MICAP-2021 is a good platform for scholars around the world, however, the spread of Covid-19 obligated us to hold the Conference online. We hope, however, that the second round will take place in reality.

To meet the operational challenges when organizing such a large conference as the MICAP-2021, the partnership of highly renowned journals was established. For instance, *Acta Physica Polonica A* is one of those journals that supports the MICAP-2021 in publishing high-quality papers. As agreed, the abstracts of the papers were preliminarily assessed for compliance with the scope of the journal by Professor Jan Mostowski — the Editor-in-Chief of *Acta Physica Polonica A*. Then, the full-text papers were reviewed by experts from different countries, and finally, the recommended papers were sent for publication.

The guest editors gratefully appreciate the help of the editorial board of *Acta Physica Polonica A* in preparing the present Special Issue. Warm gratitude goes also to the organizing, scientific, and supporting Committees, professors, journal editors, and all those who support the MICAP-2021 Conference.

Finally, we would like to express our thanks to all the participants of the Mustansiriyah International Conference on Applied Physics.

Dr. Emad H. Hussein  
*Conference Principal  
Coordinator  
Guest Editor*
