Preface

This volume of *Acta Physica Polonica A* includes contributions presented during the 30th Seminar on Positron Annihilation held from 17 to 21 September 1998 at Jarnottówek, Poland.

The meeting was a continuation of the conferences on positron annihilation inaugurated in 1966 (Stok Izerski) by the Institute of Experimental Physics of Wrocław University. The seminar covers the research fields related to phenomena of annihilation of low-energy positrons, basic and applied ones.

Sixty nine scientists from Belarus, Bulgaria, Czech Republic, Germany, Hong-Kong, Hungary, India, Italy, Japan, Russia, Slovakia, Ukraine and Poland attended the seminar. Thirty lectures and thirty two posters were presented.

We would like to offer cordial thanks to all the participants as well as the authors of contributed papers for their kind and willing cooperation in making the publication of this volume possible. We are also indebted very much to the referees, who took their time to review the manuscripts for this volume.
